

Product Spotlight: Versico VapAir Seal™ TR Plus

This month, our product spotlight is Versico's VapAir Seal TR Plus, a high-performance air and vapor barrier built to simplify installation and keep projects moving, even in cold weather.

Here are some of the benefits:

- Primerless application in approved assemblies saves steps and labor
- Butyl adhesive installs in temperatures as low as 15°F, extending the roofing season
- 5' wide roll with a split release liner for faster installs and fewer seams (60” x 120” – 570sqft of coverage)
- Doubles as a temporary roof for up to 180 days
- Reliable air and vapor barrier performance for the complete building envelope

If speed, labor savings and cold-weather installs matter on your next job, this is the air and vapor barrier to specify. It's a strong fit for data centers, distribution facilities, schools, healthcare projects and other commercial work. Reach out to your DRS rep or download the brochure to learn more.
